- Direct impact through claims inflation
- Potential levers: e.g., premium increase, product modification, improve claims handling processes (contracting structure with repair shops, partner garages), negotiate commercial discounts
- Indexation for various lines of business common in Austria, partially also in the Czech Republic; overall in CEE contracts are more short-term which allows for discretionary premium adjustments on an annual basis

Life and Health

- Indirect impact through lower new business and changed product perception from clients, potentially higher outflows
- Potential levers: e.g., promotion of inflation protection option, premium increase, preferred partnerships with hospitals/medical providers, product modification, assess product offering for the longer term
- In life, profitability of in-force business to benefit from better investment margin on savings products due to higher interest rates
